1.0 Introduction

The RIPE Database is used for providing accurate registration information about Internet number resources. Providing an accurate legal address complements the accuracy of this registration information. Objects in the RIPE Database must reflect the current state of the resources they describe.

2.0 Policy Text

The RIPE NCC will publish the

Registration number of the business

rest of the information already published in the RIPE Database.

This policy should also apply to legacy holders if they have a contractual relationship with the RIPE NCC or a sponsoring LIR.

It is recommended and encouraged that LIRs also publish the legal address of any customers that have administrative responsibility for Internet number resources.

Where the company is legally located

- Legal notices
- Assistance requests
- MLATs
- ...

Where the engineers are located

- Busy resolving technical issues
- Not having to deal with legal paperwork 😊
